

Intellidact® *lite* for Kofax

PRODUCT FEATURES:

- Free basic redaction
- Add / Change / Delete redaction areas
- Preview redaction effects
- Print image capability
- Save / release redacted images
- Seamless Kofax Integration
- Simple installation / easy use

PRODUCT BENEFITS:

- Eliminate paper based redaction processing
- Save time save money
- Start small with no cost
- Enterprise extensible privacy compliance
- 100% non reversible protection

INTELLIGENT REDACTION SOFTWARE

Identity theft and fraud crimes continue to soar while organizations and individuals struggle to find effective ways to protect their personal information, information needed to steal identities and assume lives.

What do you do if you do not need an enterprise redaction tool? Where do you turn and what is a fair price to pay? CSI answers your questions by providing you a free version of our award winning Intellidact redaction software.

Intellidact *lite* increases your efficiency and security by decreasing the amount of time you spend redacting sensitive information. Intellidact *lite* allows for redaction at the front end of your capture process to avoid users having to perform unnecessary manual steps that often occur after original document is scanned.

Using manual methods, such as the famous “black magic marker approach,” users must print the document, black out the information, and rescan it just to get a redacted electronic version. Besides the amount of time this takes, this manual method often leaves sensitive data vulnerable to enterprising criminals, who are experts at “seeing through the marker.”

WHAT CAN I DO?

Intellidact *lite* is free. Simply register and download the product from the www.intellidact.com website. Once you

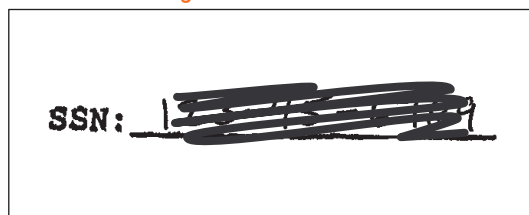

complete the installation with the help of our video guides, you are able to perform basic redaction tasks. After you scan your document, you simply select and redact the data you want in one click of a button. Before burning the redactions on a copy of the images, Intellidact *lite* allows you to preview your redacted document. You can remove or add additional redactions as needed. Once you are satisfied with your redactions, the document is ready to be printed or saved as it relates to your needs. It couldn't be easier.

Kofax customers will be pleased to learn that Intellidact *lite* seamlessly integrates within Kofax Capture as a Kofax custom module. Intellidact *lite* also includes its own export script to make the redacted documents available for your use. To find out exactly how Intellidact *lite* integrates into your business workflow, register for a download today.

WHAT IF...

What if you need assistance? CSI guides you through the Intellidact *lite* installation through easy-to-follow video instructions. As within all Intellidact solutions, Intellidact *lite*'s navigation is intuitive and easy to use. If you should, however, need additional support, we are available to provide the support as part of a pay-as-you-go support program. Of course we designed Intellidact *lite* to be support-free, so while we love talking to our customers, we do not expect to hear from you often or at all for Intellidact *lite* support needs.

“Magic Marker” Redaction

Intellidact *lite* Redaction

What if you need more advanced redaction functionality or an automated solution?
