

Intellidact[®] *lite* for Application Developers

PRODUCT FEATURES:

- Add / Change / Delete redaction areas
- Preview redaction effects
- Print image capability
- Save / release redacted images
- Simple .NET integration / easy use

PRODUCT BENEFITS:

- Eliminate paper based redaction processing
- Save time save money
- Start small with no cost
- Enterprise extensible privacy compliance
- 100% non reversible protection

YOUR CHALLENGE

Identity theft and fraud crimes continue to soar while organizations and individuals struggle to find effective ways to protect their personal information, information needed to steal identities and assume lives.

What do you do if you already have an application, but are missing document redaction capabilities now being sought by your users? Do you dedicate time to research intricacies of document imaging and invest in developing your own solution? Do you value your time and decide to stay ahead of your competitors by purchasing third party redaction technology? How do you incorporate the additional licensing costs within your software pricing? What do you do for users who have minimal redaction requirements? Do you already have a third party redaction solution but you would like to minimize or eliminate costs for such?

OUR SOLUTION

CSI provides answers and makes your decision easy by providing Intellidact *lite* for Application Developers as a free redaction control.

Intellidact, the industry's premier redaction technology is now available as a free redaction control with no licensing, no royalty, and no support costs.

Intellidact *lite* for Application Developers allows you to incorporate basic redaction functionality into any .NET application. It contains the same core operations available in Intellidact's award-winning enterprise and professional solutions deployed at over 200 counties in the United States.

Using Intellidact *lite* within your existing application, you increase user efficiency and security by decreasing the amount of time they spend redacting sensitive information. No longer will they have to interrupt scanning-to-storage workflows to perform unnecessary manual steps.

Using manual methods, such as the famous "black magic marker approach," users must print the document, black out the information, and rescan it just to get a redacted electronic version. Besides the amount of time this takes, this manual method often leaves sensitive data vulnerable to enterprising criminals, who are experts at "seeing through the marker."

WHERE DO I...

Intellidact *lite* is free. Simply register via our website and receive instructions on how to download the library and free license file. Installation consists simply of unzipping the library files to the desired development location. Detailed help on every class, property, method, and event is provided. Sample source code on how to implement the control is also provided with examples of integration as well as complete Intellidact *lite* functionality.

Within Intellidact *lite*, you simply select and redact the data you want in one click of a button. Before burning the redactions on a copy of the images, Intellidact *lite* allows you to preview your redacted document. You can remove or add additional redactions as needed. Once you are satisfied with your redactions, the document is ready to be printed or saved as it relates to your needs. It couldn't be easier.

WHAT IF...

What if you need assistance? As within all Intellidact solutions, Intellidact *lite*'s functionality is intuitive and easy to use. If you should, however, need additional support, we are available to provide the support as part of a pay-as-you-go support program. Of course we designed Intellidact *lite* to be support-free, so while we love talking to our customers, we do not expect to hear from you often or at all for Intellidact *lite* support needs.

"Magic Marker" Redaction

Intellidact *lite* Redaction

What if you need more advanced redaction functionality or an automated solution? Intellidact® Pro and Intellidact® Enterprise are available for your purchase and easy upgrade providing more advanced redaction features and high volume processing. Please consult the following chart for product features.

Product Features	Intellidact Lite	Intellidact Pro	Intellidact Enterprise
Add / change / delete redaction areas	X	X	X
Preview redaction effects	X	X	X
Print images (redacted / non redacted)	X	X	X
Save / release redacted images	X	X	X
OCR / ICR assisted redaction		X	X
Dynamic image search and redact		X	X
Free standing name redaction		X	X
Advanced validation features		X	X
Automated redaction			X
Pre defined privacy / ID theft rules			X
Redaction field classifications			X
Future proof™ processing database			X
Cursive script engine / signature redaction			X
Forensic audit trail			X
High availability / grid processing			X
Concurrent page processing			X
SDK for third party integrations			X
Additional document sources (non scan)			X
Advanced web based administration			X
Extensive system reporting			X

Intellidact *lite*, isn't it time you were given something free?
