

## Intellidact® Cloud Redaction

### CLOUD FEATURES:

- No hardware or IT infrastructure investments
- Pay just for what you process
- Secure accurate redaction and verification in real time 24x7x365
- On site Intellidact Virtual Attendant™ monitoring
- Web based monitoring of processing and charges
- Complete Intellidact redaction software suite with no onsite installation

### CLOUD BENEFITS:

- Rapid deployment with proven technology
- Eliminate licensing commitment
- Quick scale up with no volume limitations
- No changes to application software required
- No increase in staff workloads
- Document indexing and film production as well

### YOUR CHALLENGE

You have a rapidly approaching deadline to provide a redaction solution and achieve privacy compliance for your records. Your schedule has kept you preoccupied on more important matters, but you need to find a solution that is not disruptive to your existing processes. You need the solution to be seamless, scalable, require minimal staff efforts, have proven results, be of low cost, and rapid to implement.

Your software vendor mentioned they have something for you to look at, but you know they are not experts in dealing with the critical nature of accurately removing sensitive information to protect your documents. You are not sure if your software has the ability to store and track public as well as private copies of your images.

To protect your future, you do not want to lock yourself in and make an investment in technology that is specific to only one of your systems, or is not portable. You are not certain of the volume of information your organization will need to process and you don't want to commit to a specific license quantity. You are aware that identity theft is occurring with data other than social security numbers, however if you wait to see if the law changes, you realize that continued exposure of your data could be harmful.

If it were your personal information, you would want the solution to provide the best accuracy available.

### OUR SOLUTION

CSI's intelligent redaction technology, Intellidact, is now available in a cloud-based computing model to solve all of your challenges. Intellidact Cloud Redaction model provides the full features of Intellidact's market-leading redaction software along with CSI dedicated subject matter experts verifying redactions to provide you with redacted and validated documents with little to no effort of your staff.

As images are scanned and added to your repository as part of your normal document capture workflow process, Intellidact technology recognizes them as new images and sends them over a secure web connection to one of CSI's secure United States data centers. The images are then automatically processed by Intellidact, and those requiring verification being manually validated by CSI's subject matter experts before being returned automatically to your site and inserted back into your repository.

Intellidact Cloud Redaction differs dramatically from a redaction service bureau in that your staff does not have to perform any of the laborious and error prone steps associated with exporting, transferring, tracking, receiving, and importing images back and forth.

## HERE'S HOW IT WORKS

### INTELLIDACT VIRTUAL ATTENDANT

Intellidact Cloud Redaction includes Intellidact Virtual Attendant™ software technology which is installed at your site. Intellidact Virtual Attendant monitors your recording repository 24x7x365 for any newly created documents. When Intellidact Virtual Attendant discovers one, it transmits a copy of it to CSI. The transmission occurs in real time over a secure VPN tunnel to an Intellidact grid located at one of CSI's secure data centers. Once processed, the document is validated (and indexed as necessary) and returned over the same secure channel to your system for your review and acceptance.

If your system is capable of maintaining public and private documents, Virtual Attendant simply inserts the redacted document images into the appropriate "sanitized document" image storage locations. If your system does not have the capability for storing public and private documents, or you desire to have a separate repository for public images, Virtual Attendant simply places the redacted document images in the correct specified location for your future use.

In addition to processing newly filed documents, you can elect to have Intellidact's Virtual Attendant send over document sets from your existing repository allowing you to process your back file documents as desired and when funds permit.

### INTELLIDACT SHADOW REPOSITORY

For recording systems that do not have the capability to maintain public and private documents, or in situations where you desire to have a separate public repository, Intellidact can create and maintain a Shadow Repository. Intellidact's shadow repository contains all the images that have redactions performed on them.

Intellidact Cloud Redaction includes a Windows file system driver, IntelliIntercept, that intercepts all read and write requests to your disks for all data. When IntelliIntercept detects a read request for a document image, it determines if any redacted images exist for that document request. If it finds redacted images are present, it will solve the original request by providing a copy of the redacted image.

If used, IntelliIntercept provides the ability for your system to make use of the shadow repository of redacted documents, without any changes to the application.

## THE COST

Intellidact Cloud Redaction has a very simple pricing model. You pay as you go, and only for the documents that you process. To provide index data for the document, please contact your Intellidact sales consultant listed below to discuss your indexing data requirements.

Billing for processed images occurs at the end of the month and you are charged only for the images that you have submitted over the course of the month. You may monitor monthly processing volumes and charges over a web portal to keep abreast of images submitted and processed to date.

At any time you can elect to terminate your account by paying your current processing balance in full. Easy in, easy out, and just what you need.
