

It's a successful lock-down of personal information by the Marion County Clerk of the Circuit Court

"In addition to ensuring that we meet the redaction requirements issued by the State of Florida and protecting the privacy of our citizens, the solution positively impacts the productivity of our internal resources."

– David Ellspermann,
Marion County Clerk of
the Circuit Court

Under Florida's current public records law, citizens are responsible to request that private information be removed or redacted from public documents. However, beginning in the new year, the responsibility will shift to the clerks of court to ensure that social security, credit/debit card and bank account numbers are confidential under the state of Florida's open-record laws. To address this issue, Computing System Innovations (CSI) and Kofax offered Florida's Marion County a total business solution for automated redaction as well as automatic indexing of documents. Using advanced technology provided by CSI and Kofax, Marion County was able to process and redact private information from 7 million pages of official records in just seven weeks utilizing a unique processing environment.

The solution uses Kofax's Ascent® platform along with CSI's IntelliDact redaction software to provide imaging, processing, indexing and redacting as part of a scanning workflow without requiring additional software purchases or complex integration efforts. After a public record paper document is scanned and digitized using Ascent Capture®, IntelliDact's unstructured data recognition technology indexes and redacts information. IntelliDact provides an additional benefit by improving workforce indexing efficiency and reducing error rates for forward filing.
